

*The System 230 plus includes additional powerful compact fluorescent lamps which are switched separately from the halide bulbs. The fish in fresh-water aquariums will appreciate the fact that you can turn the light on/off in stages*

If you use the System 230 in your salt-water aquarium you will see the corals grow much healthier and you will experience visually a very vibrant under-water world. This happens because the compact fluorescent lamps increase the spectral component of the light. The SYSTEM 230 T-5 version incorporates two linear T-5 fluorescent bulbs rather than compact lights, which provide even more power and allow you to use the full range of 5 spectrums from the POWERCHROME range of T5 tubes. Stepless height adjustment using a steel cable is standard on the System 230 Plus.

## HIGHLIGHTS

- Vertical and horizontal alignment
- Steel cable adjustment
- Digital igniters, low-loss ballasts
- Partial-printed UV-filter glasses
- Computer-designed high-power reflectors
- Multi-coated aluminium housing
- Ceramic isolators and silicone wiring

## Additional equipment of the plus version:

- Stepless height adjustment
- Additional compact fluorescent lamps
- Separate switching of the lamp types
- Two power leads with safety plugs

## Additional equipment of the T-5 version:

- 2 x T-5 fluorescent lamps with separate triggering
- Fully reflective lamp surface
